Gazzmatic International Limited manufacture a very extensive range of adjustable dampers and suspension kits for the road and motorsport market. The units are hand built to the highest standards in our factory in the south east of England.

These products are available through a wide network of specialist outlets both in the U.K. and world wide. Gaz units are provided with an on car multi point adjustment facility that alters bump and rebound settings on a pre set ratio i.e. 31, 21 etc by a single control knob on the side of the unit. The struts and inserts in the road range are fitted with a top adjuster that alters rebound settings only but the bump setting can be altered for various motor sport use i.e. drag racing, track day or race use at the point of order.

Classic and historic car applications can be made with a variety of end fittings i.e. spherical bearings, metalastic or polyurethane bushes to suit most vehicles. These units can be plated black on request for a more period look.

Most of the bodies of the units are electro plated to help prevent corrosion. The piston rods are induction hardened and hard chrome plated to resist dirt and stone damage. Units can be valved to suit motor sport applications at no extra cost as long as this is specified at point of order. All units can be revalved to adjust ride and handling characteristics for motorsport, road and kit car use.

All road units carry a two year manufacturer's warranty.

# Gaz Product Guide

[www.gazshocks.com](http://www.gazshocks.com)

## GAZ GT

A very extensive range of telescopic dampers for both modern and classic car applications. These units can be built in various open and closed lengths and will adjust bump and rebound off a single control knob.

## GAZ GAI

A range of top adjustable inserts that alter rebound only but are available with various bump rates for road or competition cars manufactured from the 1960's onwards.

## GAZ GS

This is a fixed spring seat unit to take standard diameter coil springs with the added benefit of adjustable damping from a single control knob. These units are manufactured mainly for the classic car market to retain original equipment ride height but lengths can be adjusted to customers requirements if the car is to be lowered or raised for competition use.

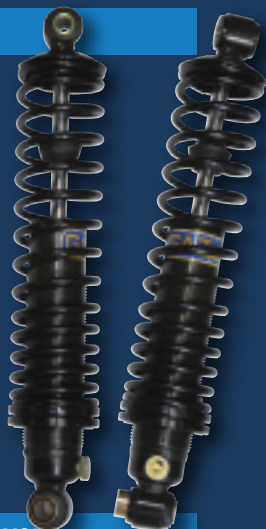

## GAZ Gold Pro

Gaz gold pro kits are a premium range of suspension units designed for fast road, track day and tarmac motorsport use. They are manufactured from high tensile alloy with induction hardened piston rods and have a multi point adjustable control knob to adjust bump and rebound. These units are filled with high viscosity index fluid to alleviate cavitation and have an internal gas cell to help prevent fade, added to this the Gaz Gold Pro range are offered with self lubricating spherical bearings and progressive bump stops.

## GAZ GP

A vast range of height and damping adjustable units for road and competition use. These units are available in two diameters 1.3/4" o.d. mainly to take 1.9" i.d. coils. These units have a 12mm piston rod and a gas cell fitted in the outer reservoir. The 2" body units are available with 1214 or 16mm rods and a wide range of spring seat sizes. These are also fitted with a gas cell to prevent cavitation and resist fade. All units are available with bearings, bonded or polyurethane bushes.

## GAZ 40mm Monotube Suspension Insert

Gaz have just released a 40mm inverted mono tube insert, which features a high quality hard chrome plated outer cylinder that is fitted with a 14mm induction hardened piston rod. The unit is charged with nitrogen and a high viscosity fluid that is separated by a floating piston for constant damping under extreme conditions. They are available in various lengths for rally, trackday and race to take roller bearing mounts.

## GAZ Double Adjustable Race Coilover

In response to customer demand, we now produce a double adjustable coilover damper specifically for competition or serious track day use where extra damper adjusting parameters are required. The body of the damper now sports two multi point adjustable control knobs, one for the bump and one for the rebound adjustment. They are manufactured from high tensile alloy with induction hardened piston rods and are filled with high viscosity index fluid to help prevent fade and have an internal gas cell to alleviate cavitation. They are available in a range of body diameters, strokes and lengths and come with the option of selflubricating spherical bearings and progressive bump stops.

## GAZ CLASSIC REBUILD SERVICE

Gaz can rebuild or modify existing suspension setups to a modern height and rate adjustable damping unit within a few weeks.

1. Old McPherson struts can be sent to GAZ to be totally reconditioned to standard or uprated specifications.
2. Units can be produced with a new outer tube threaded for height adjustment and fitted with a top adjuster.
3. The Gold range units can be made to a similar specification with bump and rebound adjustment by a side control knob with fixed or adjustable platforms for historic racing.

Customers who find they cannot obtain replacement parts for classic or historic cars, whether they utilise stub axles on McPherson struts or brackets on semi stubs should contact GAZ regarding remanufacture of these components, as we are nominally able to fabricate front and rear units to suit your requirements. Exact specifications and price will need to be agreed between customer and Gazmatic International Limited to ensure your complete satisfaction.

## GAZ GHA Kits

Gaz height adjustable kits are primarily made for the modified road car market. The main features of these kits are:

1. On car damping adjustment
  2. Shortened body and stroke lengths to allow a 25 to 65mm ride height adjustment
  3. The units have a coarse acme form thread for ease of adjustment and to minimise corrosion the unit is zinc plated.
  4. All units are provided with high quality coil springs in various rates and diameters. Spring rates can be altered on request to suit customers requirements.
  5. When a coilover is unable to be installed a separate damper and rear coil spring with a variable spring platform is used so the kit retains full height adjustment.
- N.B. These kits can obtain much lower ride heights for show purposes only but the vehicle should not be driven at these levels as the steering and drive shaft joints can lock out.

## GAZ Gold Kits

for tarmac motorsport and the serious track day enthusiast. Most of the GHA Listings are available in the Gold range with the addition of strut kits for the classic and retro car market i.e. Lotus, Cortinas, Escort, Mexicos, Capris, Lancia Intergale and Evo's.

The features are:

1. Front and rear units adjust bump and rebound from a single control knob on the side of the unit.
2. Struts and semi struts have 62mm bodies for increased oil capacity. These units are fitted with 22mm diameter induction hardened piston rods that are hard chrome plated for strength and durability.
3. All units have multi lip sealing. The outer seal is a metal encased wiper to clean the piston rod. This in turn extends main seal performance and oil retention under extreme conditions.
4. All the Gold range are fitted with a gas cell in the outer reservoir and filled with a high viscosity index multi grade oil to prevent cavitation and reduce fade in motor racing conditions.
5. The coilovers and telescopic units in this range utilise lightweight billet alloy components where possible, i.e. bases, end fittings, seats, lockrings, rod guides and gland nuts. The outer tube is steel with a black zinc plated coating to provide the best anti corrosive finish possible. All outer alloy components are anodised.
6. A full range of springs are stocked at the factory for road and motorsport use.

## GAZ Monotube

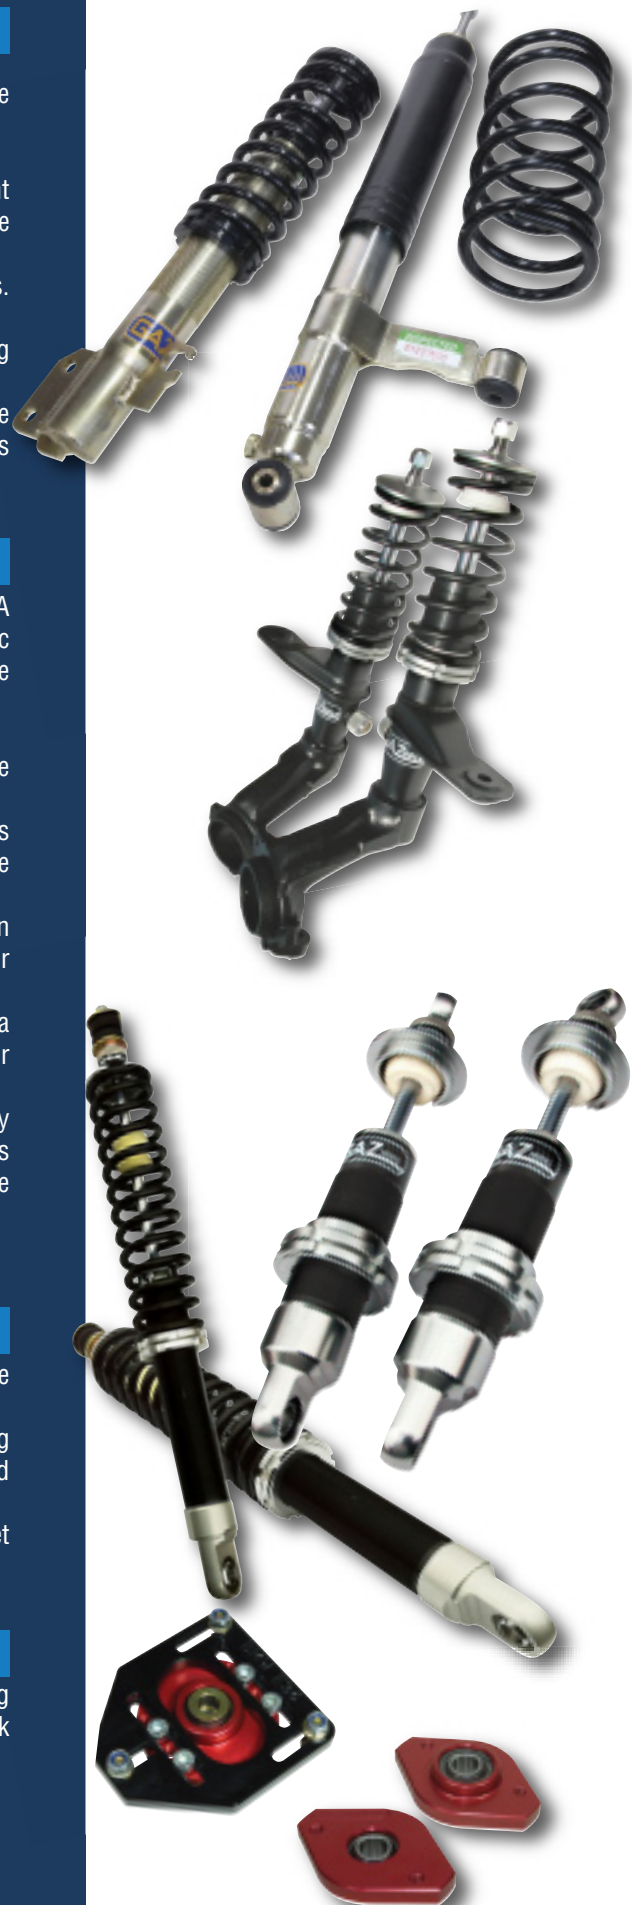

day enthusiasts. Built from high tensile alloy to withstand the high stresses that are involved in race conditions.

The damper body is hard anodised to give maximum protection against wear during use. Bump and rebound are on the car adjustable by a single adjuster on the rod and the unit is charged with an inert gas via an internal floating piston.

PTFE lined spherical bearings are used for the end fittings to give a smooth quiet mounting of the unit.

## GAZ Top Mounts and Camber Adjusters

eccentric top mounts to improve handling and provide adjustability for the steering geometry. Although they will improve handling they are only recommended for track and race use as the resulting ride would be too harsh for regular road use.

## Gaz Adjustable Suspension Kits

[www.gazshocks.com](http://www.gazshocks.com)

### Additional Notes:

1. Original equipment donor units are required.
- 1R. Original equipment rear donor strut required.
- 1F&R Original equipment front and rear donor struts required.
2. Original equipment front struts are required for rebuild to height adjustable front struts.
3. Telescopic rears not coilovers, rear height adjustment achieved by lowered springs only (supplied).
4. Telescopic rears not coilovers, rear height adjustment possible using original equipment torsion bars. Specialist knowledge required.
5. Original Equipment configuration is a separate spring/damper installation. GHA and GGA provide a coilover damper which requires the installation of a rear strut brace.
6. Full rear conversion kit available. Vehicle rear turrets require professional installation.
7. Telescopic rears not coilovers, rear height adjustment achieved by lowered springs and GAZ adjustable spring pans (supplied)
8. Front height adjustment is achieved by using a supplied threaded external tube and 65mm id coil springs fitted to original struts.
9. Kits are also available with Roller bearing top mounts, shortened damper bodies etc. Phone for details of specification and price.

## Why choose GAZ?

- **Flexibility / Adaptabilité / Flexibilität / Flexibilidad**
- Easy multi point rotary adjustment providing the facility for fine tuning without the need to remove the shock absorber from the car.
- **Revolutionary / Révolutionnaire / Revolutionär / Revolucionario**
- Double lip seal plus a further stem seal on the piston rod. Produces a shock absorber with unrivalled performance characteristics for both the road and track.
- **Drivability / Conduite / Fahrbarkeit / Maneiabilidad**
- Employing our complete understanding of every aspect of damping technology we believe that Gaz shock absorbers strike the ultimate balance between comfort and performance road holding.

- **Reliability / Fiabilité / Zuverlässigkeit / Seguridad**
- Every unit is fully tested and despatched from our factory with an individual dynamometer report.
- **Quality / Qualité / Qualität / Calidad**
- Made to accredited ISO9001 standard and supplied with a 2 year warranty.
- **Durability / Longévité / Widerstandsfähigkeit / Durabilidad**
- Electro plated body that resists salt spray and road grime on vehicles where detailing really matters.
- **Availability / Disponibilitat / Verfügbarkeit / Existencias**
- A full range of fully adjustable shock absorbers and suspension kits for popular models.
- **TÜV and ISO 9000 Certified**

## Fitting Advice

1. Gazmatic Products should only be fitted by a suitably qualified person, as per the original equipment.
3. Never grip the piston rod, as this will damage the highly polished surface leading to possible premature failure of damper.
5. Check that after fitting there is space between the bump stops and the top of the damper. If there is not you may need to purchase shorter bump stops. Never omit the bump stops, if supplied.
6. After lowering or raising any vehicle, it is necessary to reset the tracking and in some cases also the camber settings. These should be returned to factory settings where possible.
7. To set up your car, set all the damper adjusters to mid setting, then adjust to suit
8. When fitting nonstandard wheel and tyre combinations and lowering the vehicle it is the responsibility of the owner to ensure there is adequate body and tyre clearance.
10. The top adjustable struts have multi rebound adjustments. Turning the adjusters fully anticlockwise gives a soft setting. Turning the adjusters clockwise gives a harder setting.
11. The Gaz shock adjuster affects both bump and rebound. To set the adjuster for the soft position turn anticlockwise until it stops. The multi point adjustment will increase the damping forces with each clockwise click of the adjuster knob. Excessive over adjustment may cause damage to the adjuster mechanism.
12. Maximum lowering is achieved where the bump stops are sitting just off the top of the dampers. Never ride the car on the bump stops as this will decrease the life of the dampers and not give optimum handling.
13. Using stiffened/uprated shock absorbers and springs increases the load on other suspension components. We do not accept any liability for premature failure of any associated part.
14. To get the best results from your Gaz kit, geometry set by a specialist.

## General information regarding the fitment of shock absorbers, suspension struts and lowering kits.

Replacing shock absorbers on any vehicle requires mechanical automotive experience. Under no circumstances should any tool be used to grip the piston rod. This will inevitably produce damage to the smooth surface of the piston rod and torn chamber seals, resulting in fluid loss and an unservicable unit. Please take time to examine other suspension components during fitment and renew any worn items with suitable replacements.

## Suitability

Be sure to check that the parts you are supplied are suitable for the vehicle for which they are intended. We cannot replace any items that have been correctly supplied to the information that we have been given after they have been fitted.

## Springs

Please ensure that springs are fitted correctly and not inverted. If you are unable to determine the correct fitting position for your vehicle please refer to your workshop manual or seek guidance from a qualified person.

## Brake bias adjustment

Some vehicles that are fitted with a brake bias system may require resetting or adjustment after installation of your new shock absorbers and springs.

## Mechanical ABS sensor adjustment

Some vehicles that are fitted with mechanical ABS sensors may require resetting or adjustment after installation of your new shock absorbers and springs.

## Steering geometry

Unless Gaz Shocks specify alternative measurements, please use the settings detailed by the manufacturer of the vehicle.

## Lowering measurements

The reduction in ride height quoted in our catalogue is approximate and can be affected by many factors that are outside the control of GAZ Shocks. Please ensure that your car has not been subject to any other conversion that may continue to influence its ride height after installation and impair the performance of our product.

N.B With some Mercedes models, worn spacers between the coil spring and spring pan may result in excessive lowering. Replacement spacers are readily available from Mercedes Benz spares stockists and should effectively remedy this problem.

## Problems associated with excessive lowering

Gaz Shocks recommend that no vehicle is lowered more than 60mm. We will not accept any claim for damage or excessive wear to any component or area of a vehicle however caused. Vehicles that have had their ride height reduced in excess of 40mm often benefit from having their steering geometry reset to the data detailed by the manufacturer of the vehicle to promote even tyre wear. In some extreme cases even this course of action will not remedy the situation and Gaz Shocks cannot be held responsible for any excessive tyre wear however caused.

## Aftermarket wheels & tyres

Please ensure that the wheels and tyres fitted to the vehicle will allow enough clearance from the bodywork after installation of the lowering kit. Gaz Shocks are not responsible for any damage to tyres or bodywork caused by friction during contact.

## Gaz Shocks warranty

Your Gaz Shock is covered by a two year warranty, effective from the date that the shock was purchased. In the unlikely event of a claim under the warranty, the Company will require evidence of purchase. It is a requirement of the Gaz warranty agreement that any faulty unit must be returned to the dealer from whom it was purchased. The dealer will then forward it to the Gaz Quality Department who will assess any relevant claim. The Company will, at its discretion, repair or replace shocks which are part of a valid claim. This warranty will not be valid if there is evidence of incorrect installation or signs that the unit has been tampered with. Units should be returned to the Quality Manager, at the address shown below. A note giving details of the failure and the conditions prevailing at the time should accompany the unit. Receipt of the unit will be acknowledged and the Company will endeavour to respond within 10 working days. This warranty does not apply if the shock has been used for competition purposes. Gaz Shocks are dedicated to producing Shock Absorbers and Struts that satisfy the exacting requirements of our customers. As part of our Quality System, we are committed to a quality improvement programme and we regard the feedback of our customers as an essential part of this process.

**WARNING Do not overtighten base control knob in either direction, as this will result in locking the adjustment on the complete assembly.**

**Any comments / observations that you have should be sent to:**
